

Workshop

Battle of Towers

Contact person Robert Lechner & Julia Lindenthal (austrian institute of ecology)

Interested persons

Basam Hawek basam.hawek@gmail.com

Main results/conclusions

Sustainable high rising buildings need:

- integral planning
- innovative & elaborated technical systems
- reduction of 'stand by' demand

→ biggest consumer in residential towers: heating of water  
→ " " in office towers: demand for air ventilation

⇒ evaluate during planning phase efforts and benefits of certain measures

Proposal for further activities

keep on going!

- Consider : Consumption of resources such as metals in building TOWERS; The Life cycle analysis for such processes would be interesting to do
- The point source of waste water discharge & demand will be terribly high; municipalities may not be able to cope → infrastructure issue
