Main results/conclusions

Proposal for further activities

- More in-depth comparative research studies focusing on regions including higher/lower territorial scales, using different indicators as well "stories" of how regions/stakeholders coped with crises in the past -> action orientation, towards more options to solve problems.
- use Community-led local development ("CLLD" foreseen in EU 2020) to experiment new solutions (zero-carbon, smart cities, crowdsourcing, e-mobility, intercultural processes...) with "scientific" support
