Title of the Paper

Knowledge for Sustainable Consumption Policies – Experiences from CORPUS, a European Project on Knowledge Brokerage

Form of Presentation

- Poster
- Presentation

Short Description (maximum 2500 characters)

Sustainable consumption has become an increasingly significant topic on the European political agenda. At the same time, European research exploring sustainable consumer behaviour has also rapidly developed. Yet the huge body of existing research has until now been underutilised: Hence the initiation of the EU-funded project “CORPUS – Enhancing the Connectivity Between Research and Policymaking in Sustainable Consumption”.

The aim of CORPUS is to develop novel approaches to knowledge brokerage (KB) between policy-making and research, by means of testing a combination of online and offline tools. The knowledge brokerage system developed by CORPUS consists of a web platform and three series of interaction exercises.

The CORPUS Web Platform (www.scp-knowledge.eu) has become a central reference point for high quality information and networking among European professionals working with sustainable consumption. By end of 2011 the knowledge hub provides around 500 documents (scientific publications, policy documents, CORPUS papers, etc.) and the community of users comprises over 600 professionals. The repository is continually growing as users upload new knowledge items. A search engine facilitates a targeted search of experts, documents, and other information available on the website. A “questions & answers” functionality enables thematic dialogues among community members.

The Interaction Exercises – “Policy Meets Research” workshops – in three priority areas of sustainable consumption (food, mobility, housing) explore novel modalities of knowledge brokerage through different forms of face-to-face dialogues. They provide specifically tailored arenas for personal exchange, information provision, and offline community-building. Three workshops are conducted in each policy domain. The first focuses on the main characteristics and sustainability challenges facing each domain, the second workshop deals with policy strategies and policy instruments, and the third workshop explores the role of participatory scenario-building within policy planning. Six out of nine workshops have been carried out so far.

The presentation will start from the barriers to knowledge brokerage between science and policy-making, elaborate on the approach taken in CORPUS to overcome these obstacles, and display preliminary insight gained in CORPUS into effective online and offline tools of knowledge brokerage in sustainable consumption.
